[hi@lautarolopez.tech](#)

About me: I learned the core of programming on college, where I started without having code before. I got bored and dropped, and then fell in love of the web learning Javascript, React and Node. The process between a problem and a solution is my favourite part of the job. I aim to be a solutions architect.
My tools: Javascript, Typescript, React, Node, NextJs, Express, PostgreSQL, MySQL, AWS, Docker, CI/CD, Tailwind, Git, Figma.
Skills: C2/Proficient English (EFSTET Certificate), Scrum Foundation Professional Certificate (SFPC CertiProf)

Academic Background:
Universidad Nacional de La Plata | 2016 - Present   Buenos Aires, Argentina
Computer Engineering
Digital House | 2019 - 2020   Buenos Aires, Argentina
Fullstack Web Developer

Professional Experience:
Kubikware, LLC | January 2024 - Present   Remote
React/Node/Laravel Developer
Currently I'm helping HelloHive to move into a new platform to allow users create an optimal resume and apply to different positions with it. I'm part of a small team that develops all new features with React and Laravel, with some services running Node.
Tools: React, Laravel, Node, AWS

Symfa | October 2022 - October 2023   Remote
React/Node Developer
I was part of the team that maintained a coupon and offers application for Reynolds American. The project was a PWA written in javascript, handlebars, CSS and typescript on AWS Lambdas. I was part of the migration into React and accessibility improvements. After that project I help on the maintenance of in-company React applications for Symfa.
Tools: React, Javascript, AWS, Postgres, Typescript, Handlebars

Tap Billetera/Payana | Decemberr 2021 - October 2022   Remote
React/Node Developer
I joined Tap Billetera as a backend developer to work on the virtual wallet application. I handled diverse features on a microservices architecture working with Javascript and clean architecture, such as the fraud microservice, that implemented several rules over transactions and users to avoid malicious usage of the platform. After the wallet was discontinued I moved to another project on the company, Payana, a web platform to help small businesses handle payments and billing. I was part of the team designing the architecture of the platform, based on javascript microservices and React for the web application.
Tools: React, Javascript, AWS, Posgres

Softtek | August 2021 - December 2021   Remote
React/Node Developer
I joined Softtek to work with OSDE, a health insurance company in Argentina. I helped improve the enrollment application, a multistep form with the capability of categorize clients, and also maintained and developed new features for the backoffice used to handle the applications. Both applications using React, and the backend services with Express and NestJs,
Tools: React, Typescript, MaterialUI, Node, Express, NestJs, GCP

BPMX | November 2020 - August 2021   Remote
Java Developer
Started my professional journey at BPMX, working in a proprietary framework to create BPM platforms. I analyzed the problems that the developers had using the framework and apply custom solutions using Java. When the company decided upgrade its website, I volunteered and participated on the implementation using React.
Tools: Java, Gradle, Javascript, GWT, React

Projects:
CAT Filmmaker | [Website](#)   Remote
React/Node Developer
I designed, developed and deploy the portfolio for a wedding photographer and filmmaker, along with a platform to manage the content using Sanity.io. The design was made in Figma, and with the approval the implementation was developed on NextJs, and deployed on Vercel. The content was stored in AWS S3 Buckets using Lambda functions.
Tools: Typescript, React, NextJs, Sanity.io, Figma
